

P42 Zero Clearance Direct Vent Gas Fireplace

Model	P42-NG4	P42-LP4
Fuel Type	Natural Gas	Propane
Minimum Supply Pressure	5" W.C. (1.25 kPa)	12" W.C. (3.00 kPa)
Manifold Pressure - High	3.8" W.C. (0.94 kPa)	10" W.C. (2.49 kPa)
Manifold Pressure - Low	0.9" W.C. (0.22 kPa)	3.6" W.C. (0.89 kPa)
Orifice Size	#33 DMS	#50 DMS
Minimum Input	17,500 BTU/h (5.13 kW)	17,500 BTU/h (5.13 kW)
Maximum Input	35,000 BTU/h (10.25 kW)	35,000 BTU/h (10.25 kW)
Vent Sizing	4" Inner / 6-5/8" Outer	4" Inner / 6-5/8" Outer

Approved Venting Systems	
Flex Vent Systems:	FPI AstroCap™ Flex Vent
Rigid Pipe Vent Systems:	Simpson Dura-Vent® Direct Vent GS American Metal Products Ameri Vent Security Secure Vent® Selkirk Direct-Temp.

Unit Dimensions	Description	P42
A	Front Face Width	40" (1016mm)
B	Rear Firebox Width	24-1/4" (616mm)
C	Front Face Height	34" (864mm)
D	Height w/ Standoff	36-1/2" (927mm)
E	Unit Depth	18-5/8" (473mm)
F	Height to Vent	35-5/8" (905mm)
Framing Dimensions	Description	P42
G	Framing Width	40-1/4" (1029mm)
H***	Framing Height***	36-5/8" (930mm)***
I	Framing Depth	19" (480mm)
J	Corner Wall Length	44-3/4" (1137mm)
K	Corner Facing Wall Width	63-5/16" (1608mm)
L	Minimum Height to Combustibles	51-7/8" (1318mm)
M	Vent Centerline Height	43" (1092mm)
N	Gas Connection Height	1-1/2" (38mm)
O	Gas Connection Inset	4-3/4" (121mm)
P	Gas Connection Width	3" (76mm)

*** Framing height requires consideration of the hearth depth.
Dimension H = H + the thickness of installed hearth.

Please refer to Page 11 (Exterior Vent Terminations)
for additional guidelines on vent locations.

P42 Gas Fireplace

Framing and Finishing

- 1) Determine the total thickness of facing material (e.g. drywall plus ceramic tiles) to allow the finished surface to be flush with the front of the unit. Total facing thickness can vary from 1/2" (13mm) to 1-1/4" (32mm) thick.
- 2) Frame in the enclosure for the unit with framing material.
- 3) For exterior walls, insulate the enclosure to the same degree as the rest of the house, apply vapor barrier and drywall, as per local installation codes. **(Do not insulate the fireplace itself.)**
- 4) The top of the unit must not be closer than 36" (914mm) to the ceiling.
- 5) Combustible material may be brought up to the top and sides of the unit and be covered with ceramic tiles, bricks, rock or other suitable combustible finishing materials.
Note: The unit does not have to be completely enclosed in a chase. The clearance on top of the unit is 0" to the standoffs so combustible building materials can be laid directly on top of the standoffs. You must maintain proper clearances from the vent to combustible materials (See Below).
- 6) Use metal studs for framing where the minimum clearance from the vent to combustible material cannot be maintained.

Clearance Requirements

Clearance:	Dimension	Measured From:
A: Mantel Height	7" (178mm)	Minimum (Additional on this page)
B: Sidewall	6" (152mm)	Side of installed front
C: Ceiling	36" (914mm)	Top of installed unit
D: Mantel Depth	12" (305mm)	Maximum (Additional on this page)
E: Alcove Width	52" (1321mm)	Sidewall to Sidewall (Minimum)
F: Alcove Depth	36" (914mm)	Front to back wall (Maximum)

Top of Hearth must not be higher than the base of the firebox.

Vent Clearances	Clearance Dimension
Flex	1-1/2" (38mm)
Rigid Pipe	1-1/4" (32mm)

WARNING

Failure to maintain required clearances is a major cause of chimney related fires. Installation of this fireplace must comply with these clearances.

Combustible Mantels

Because of the extreme heat this fireplace emits, the mantel clearances are critical. Combustible mantel clearances from top of the louvers are shown in the diagram below. Mantel may be installed anywhere in the shaded area or higher.

Mantel Clearances	A	B	C	D
Front	32-1/4" (819mm)	14" (356mm)	10" (254mm)	7" (178mm)

Note: If desired a non-combustible mantel may be installed at a lower height.

Note: Ensure the paint that is used on the mantel and the facing is "heat resistant" or the paint may discolour.

Mantel Leg Clearances

Combustible mantel leg clearances as per diagram below: Clearances are from the finished edge of the unit or an installed front.

Regency Direct Vent System (Flex) Horizontal Terminations Only

These venting systems, in combination with the P42 Direct Vent Gas Fireplace, have been tested and listed as a direct vent heater system by Warnock Hersey. The location of the termination cap must conform to the requirements in the Vent Terminal Locations diagram.

FPI Direct Vent (Flex) System Termination Kits include all the parts needed to install the P42 using a flexible vent.

FPI Kit #	Length	Contains:
#946-515	4 Feet	1) 6-5/8" flexible liner (Kit length) 2) 4" flexible liner (Kit length) 3) spring spacers (3) 4) thimble (2) 5) AstroCap termination cap (1)
#946-516	10 Feet	6) screws (12) 7) tube of Mill Pac (1) 8) plated screws (8) 9) S.S. screws #8 x 1-1/2" drill point, (4)

Notes:

- 1) Liner sections should be continuous without any joints or seams.
- 2) Only Flex pipe purchased from Regency may be used for Flex installations.
- 3) Horizontal sections must be supported every 3 feet.

If required by the external termination location the listed alternate termination caps may be used. (Refer to Page 11)

Snorkel Terminations

Snorkel Terminations:

For installations requiring a vertical rise on the exterior of the building, 14-inch and 36-inch tall Snorkel Terminations and the Riser Vent are available. Follow the same installation procedures as used for standard Horizontal Termination. NEVER install the snorkel upside down.

Below Grade Snorkel Installation (Dura-Vent Only)

If the Snorkel Termination must be installed below grade, i.e. basement application, proper drainage must be provided to prevent water from entering the Snorkel Termination. Refer to Rigid Pipe Installation instructions for details. Do not attempt to enclose the Snorkel within the wall, or any other type of enclosure.

P42 Gas Fireplace

Rigid Pipe Venting

Horizontal or Vertical Terminations

If required by the external termination location the listed alternate termination caps may be used. (Refer to Page 11)

Venting Arrangements - Vertical Terminations

Rigid Pipe System

(Propane & Natural Gas)

The P42 is approved for a maximum 37 ft. straight vertical, with **Rigid Pipe** vent systems for Propane and Natural Gas. On a straight vertical installation a vent restrictor #6 must be used after 15 feet.

The diagram to the right shows all allowable combinations of straight vertical and offset to vertical terminations with **Rigid Pipe** vent systems for Propane and Natural Gas. Maximum two 90° elbows allowed.

The lightly shaded area, , in the diagram shows allowable venting configurations with a maximum two 45° elbows allowed. The darker shaded area, , directly above the lightly shaded area shows configurations above 15 feet where a vent restrictor #6 must be used.

The medium shaded area, , in the diagram shows allowable venting configurations using two 90° elbows. A minimum vertical vent run of 5' directly preceding the termination is required.

- **Vent must be supported at offsets.**
- **Horizontal sections must be supported every 3 feet.**
- **Firestops are required at each floor level and whenever passing through a wall.**
- **Maintain clearances to combustible materials.**
- **Minimum of 1' pipe section between elbows.**

Note: Must use optional flue adapter when using Rigid Pipe (Part # 510-994).

Venting Arrangements - Horizontal Terminations

This diagram shows all allowable combinations of vertical runs with horizontal terminations, **using one 90° elbow** (two 45° elbows equal one 90° elbow).

Note: Must use optional flue adapter (Part # 510-994) when using Rigid Pipe.

- Maintain clearances to combustibles.
- Horizontal vent must be supported every 3 feet.
- Firestops are required at each floor level and whenever passing through a wall.

A vent guard should be used whenever the termination is lower than the specified minimum or as per local codes.

Note: FPI Direct Vent System (Flex) is only approved for horizontal terminations.

Please refer to Page 11 (Exterior Vent Terminations) for additional guidelines on vent locations.

Horizontal Venting with Two (2) 90° Elbows

Two 45° elbows = One 90° elbow

- 1) A maximum of two 90° elbows are permitted (two 45° elbows equal one 90° elbow).
- 2) A minimum of 6 ft. (1.8m) vertical from base of unit is required if two 90° elbows are used.
- 3) Minimum distance between elbows is 2 ft. (0.6m).
- 4) Determine the permitted range of horizontal termination arrangements using chart and deducting 3 ft. (0.9m) from the maximum horizontal distance for the second 90° elbow.

P42 Gas Fireplace

Vertical termination with co-linear flex system

The appliance must not be connected to a chimney flue serving a separate solid fuel burning appliance.

Masonry chimneys may take various contours which the flexible liner will accommodate. However, **keep the flexible liner as straight as possible**, avoid unnecessary bending.

The Air Intake pipe must be attached to the inlet air collar of the termination cap.

This appliance is designed to be attached to two 3" (76mm) co-linear aluminium flex running the full length of the chimney. See the Venting Arrangements for minimum and maximum heights.

Required Parts:

Part #	Description
946-529	Co-linear DV Vertical Termination Cap
948-305	3" Flex - 35 ft.
946-563	Coaxial to Co-linear Adapter Kit which contains the following: Co-linear Flex Adapter Outer Pipe Inner Pipe Adapter
510-994	Flue Adapter
Alternate Approved Caps	
980	Vertical Termination Cap
991	High Wind Cap
923GK	3" Co-linear Adapter with flashing

The shaded area in the diagrams show the allowable vertical terminations.

Please refer to Page 11 (Exterior Vent Terminations) for additional guidelines on vent locations.
